Realize Insight

Keeping you up to date with tips and insights into what's happening in today's business technology environment.

Tech Tip 1 Want an easier way to navigate your system tray icons?

Select the Windows key + B and the cursor will automatically select the system tray arrow. Press enter and the system icons will appear. Use the arrow keys to navigate through the icons, and press enter to select the system icon you want to open.

Tech Tip 2 Have you ever accidentally closed a browser?

This happens all the time when you have several tabs open and can be very frustrating trying to figure out which browser you closed. Hit Ctrl+Shift+T on your PC or Command+Shift+T on your Mac to automatically reopen the tab you just closed. Problem solved!

Cybersecurity Tip: Avoid Public Wi-Fi

Public Wi-Fi hotspots are yet another space where cybercriminals reign supreme. These networks tend to be un-secure, and those with the know-how can view any information you are dealing with while connected. If you must use public Wi-Fi, always use either a VPN, or if that is not possible, use the hot spot on your mobile device to access the information you need.

Special Offer 1

Free Cybersecurity Consultation

Cybersecurity is one of the biggest concerns facing businesses today. One major breach can put a company out of business. How safe is your network? We will provide a two-hour basic cybersecurity consultation at no charge. (**\$300 value**)

Current Events at Realize Information Technology

We are very excited about our new automation software, "Realize IT Health Monitor." We are halfway through the five-month implementation process and it is already exceeding our expectations. One of our primary goals is to minimize unscheduled downtime by catching potential issues before they become a bigger problem. Our new automation software will allow us to monitor hundreds of data points on each device in real time. When an issue is detected our software will take

pre-defined actions to resolve the issue before the user may even realize there is an issue starting. If the Realize IT Health Monitor is not able to resolve the issue it will notify our Help Desk. Depending on your service agreement type, we will either assign a tech to resolve the issue or we contact the client for billable time approval before incurring any charges. We are very proud of our new software and would love to discuss it if you have any questions or would like more information.
